| 10  | NCMC | 18MATDIP31 | Additional Mathematics – I | Mathematics | 3 | 1 | - | 3 | 00 | 100 | 100 | 00 |
| 1) Non Credit Mandatory Courses (NCMC) Additional Mathematics-I and II prescribed for III and IV semesters respectively, to the lateral entry Diploma holders admitted to III semester of B. Tech. programs, shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the university examination. In case any student fails to register for the said course/fails to secure the minimum 50% of the prescribed CIE marks, he/she shall be deemed to have secured F grade. In such a case, the students have to fulfill the requirements during subsequent semester/s to appear for SEE. |      |            |                            |             |   |   |   |   |    |     |     |    |
| 2) These courses shall not be mandatory for vertical progression, but completion of the courses shall be mandatory for the award of degree.   |      |            |                            |             |   |   |   |   |    |     |     |    |
| <b>Courses prescribed to lateral entry B.Sc. degree holders admitted to III semester of Engineering programs</b>  |      |            |                            |             |   |   |   |   |    |     |     |    |
| Lateral entry students from B.Sc. stream, shall clear the non credit courses Computer Aided Engineering Drawing, Elements of Civil Engineering of First Year Engineering Programme. These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree.   |      |            |                            |             |   |   |   |   |    |     |     |    |
| <b>AICTE Activity Points to be earned by students admitted to B.Tech. programme ( For more details refer to Chapter 6,AICTE Activity Point Programme, Model Internship Guidelines):</b>   |      |            |                            |             |   |   |   |   |    |     |     |    |
| Over and above the academic grades, every regular student admitted to the 4 years Degree programme and every student entering 4 years Degree programme through lateral entry, shall earn 100 and 75 Activity points respectively for the award of degree through AICTE Activity Point Programme. Students transferred from other universities to fifth semester are required to earn 50 activity points from the year of entry to Sharnbasva University. The Activity Points earned shall be reflected on the students eighth semester Grade card.  |      |            |                            |             |   |   |   |   |    |     |     |    |
| The activities can be spread over the years, anytime during the semester weekends holidays, as per the liking and convenience of the student from the year of entry to the programme. However, minimum hours requirement should be fulfilled. Activity Points(non credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression.   |      |            |                            |             |   |   |   |   |    |     |     |    |
| In case students fail to earn the prescribed activity points, Eighth semester Grade Card shall be issued only after earning the required activity points. Student shall be admitted for the award of the degree only after the release of the Eighth semester Grade Card.   |      |            |                            |             |   |   |   |   |    |     |     |    |

In case any student fails to register for the said course/fails to secure the minimum 50% of the prescribed CIE marks, he/she shall be deemed to have secured F grade. In such a case, the students have to fulfill the requirements during subsequent semester/s to appear for SEE. |      |            |                             |             |   |   |   |   |    |     |     |    |
| 4) These courses shall not be mandatory for vertical progression, but completion of the courses shall be mandatory for the award of degree.   |      |            |                             |             |   |   |   |   |    |     |     |    |
| <b>Courses prescribed to lateral entry B.Sc. degree holders admitted to III semester of Engineering programs</b>  |      |            |                             |             |   |   |   |   |    |     |     |    |
| Lateral entry students from B.Sc. stream, shall clear the non credit courses Computer Aided Engineering Drawing, Elements of Civil Engineering of First Year Engineering Programme. These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree.   |      |            |                             |             |   |   |   |   |    |     |     |    |
| <b>AICTE Activity Points to be earned by students admitted to B.Tech. programme ( For more details refer to Chapter 6,AICTE Activity Point Programme, Model Internship Guidelines):</b>   |      |            |                             |             |   |   |   |   |    |     |     |    |
| Over and above the academic grades, every regular student admitted to the 4 years Degree programme and every student entering 4 years Degree programme through lateral entry, shall earn 100 and 75 Activity points respectively for the award of degree through AICTE Activity Point Programme. Students transferred from other universities to fifth semester are required to earn 50 activity points from the year of entry to Sharnbasva University. The Activity Points earned shall be reflected on the students eighth semester Grade card.  |      |            |                             |             |   |   |   |   |    |     |     |    |
| The activities can be spread over the years, anytime during the semester weekends holidays, as per the liking and convenience of the student from the year of entry to the programme. However, minimum hours requirement should be fulfilled. Activity Points(non credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression.   |      |            |                             |             |   |   |   |   |    |     |     |    |
| In case students fail to earn the prescribed activity points, Eighth semester Grade Card shall be issued only after earning the required activity points. Student shall be admitted for the award of the degree only after the release of the Eighth semester Grade Card.   |      |            |                             |             |   |   |   |   |    |     |     |    |

| <b>Course Objectives:</b> This course will enable students to: <ul style="list-style-type: none"> <li>• Introduce most commonly used analytical and numerical methods in the different engineering Fields.</li> <li>• Learn Laplace transform and Z-transforms, statistical methods, numerical methods.</li> <li>• Solve the problem on Interpolation.</li> <li>• To discuss the random variable and associated probability distributions.</li> </ul>  |         |            |                       |
| <b>Module -1</b>   |         |            | <b>Teaching Hours</b> |
| <b>LAPLACE TRANSFORMS:</b> Definition Transforms of Elementary functions, properties of periodic function, Unit step function, Unit impulse function.<br><b>INVERSE LAPLACE TRANSFORMS:</b> Definition, Convolution Theorem (without proof) and Finding Inverse Laplace transform by convolution Theorem. Solution of Linear Differential equations using Laplace Transforms and Applications (5 Assignment Problem).<br><p style="text-align: right;"><b>RBT: L1,L2</b></p>   |         |            | 10 Hours              |
| <b>Module -2</b>   |         |            |                       |
| <b>Z-TRANSFORMS:</b> Difference Equations, Basic definitions, Damping rule, Shifting rule, Initial and Final Value theorems (without proof) and problems. Inverse Z-transforms. Applications of Z-transforms to solve difference equation (5 Assignment Problem).<br><p style="text-align: right;"><b>RBT: L1,L2</b></p>   |         |            | 10 Hours              |
| <b>Module -3</b>   |         |            |                       |
| <b>STATISTICAL METHODS:</b> Correlation-karl Pearson's co-efficient of correlation problems. Regression analysis lines of regression (without proof)-problems.<br><b>CURVE FITTING:</b> Curve fitting by the method of least square. Fitting of the curves of the form $y = ax + b$ , $y = ax^2 + bx + c$ & $y = ae^{bx}$ .<br><b>Numerical Methods:</b> Numerical solution of algebraic and transcendental equations by Regula - Falsi Method and Newton-Raphson method. (5 Assignment Problem).<br><p style="text-align: right;"><b>RBT: L1,L2</b></p> |         |            | 10 Hours              |
| <b>Module -4</b>   |         |            |                       |
| <b>FINITE DIFFERENCE:</b> Forward and Backward differences, Newton's forward and backward interpolation formulae. Divided difference-Newton's divided difference formulae. Lagrange's-interpolation formula and inverse interpolation formula (all formula without proof) problems.<br><b>NUMERICAL INTEGRATION:</b> Simpsons $(\frac{1}{3})^{rd}$ , $(\frac{3}{8})^{th}$ rules, Weddle's rule (without proof) problems. (5 Assignment Problem).<br><p style="text-align: right;"><b>RBT: L1,L2</b></p>  |         |            | 10 Hours              |
| <b>Module -5</b>   |         |            |                       |
| <b>Probability Distribution:</b> Random variables (discrete and continuous) probability mass/density functions. Binomial distribution, Poisson distribution. Exponential and Normal distributions. Problems. (5 Assignment Problem).<br><p style="text-align: right;"><b>RBT: L1,L2</b></p>  |         |            | 10 Hours              |
| <b>Course Outcomes:</b> After studying this course, students will be able to: <ul style="list-style-type: none"> <li>• Know the use of Laplace transform and inverse Laplace transform in signal and image</li> </ul>  |         |            |                       |

Processing.

- Explain the general linear system theory for continuous Time signals and digital signal processing using the Z-transform.
- Employ appropriate numerical methods to solve algebraic and transcendental equations.
- Apply Green's Theorem, Divergence Theorem and Stokes theorem in various applications in the field of electro-magnetic and gravitational fields and fluid flow problems.

#### CREDITS-01

**Course Objectives:** This laboratory course will enable students to:

- Understand the working principle of Diode clipping and clamping circuits.
- Characterize the JFET and MOSFET.
- Design and evaluate the BJT and Class B push pull power amplifier.
- Realize the oscillator circuits such as RC phase shift oscillator, Colpitts, Hartley and Crystal oscillator.
- Design and realize the Adder, Differentiator, Integrator, R-2R ladder DAC, Precision full wave rectifier and Schmitt trigger circuit using Op-Amp.

|  |
|--|
| <ul style="list-style-type: none"> <li>• Design and realize Monostable and Astable multivibrator using 555 Timer.</li> <li>• Design and realize the fixed voltage power supply using IC regulator.</li> </ul>  |
| <b>Note:</b> <ul style="list-style-type: none"> <li>• The experiments are to be carried out using discrete components, out of which three experiments are to be carried out through simulation.</li> </ul>   |
| <b>List of Experiments:</b> <ol style="list-style-type: none"> <li>1. Design and testing of diode clipping and clamping circuits.</li> <li>2. Verify JFET and MOSFET characteristics.</li> <li>3. Design and test the BJT amplifier circuit and obtain the frequency response characteristics.</li> <li>4. Design and testing of RC phase shift oscillator, Crystal oscillator using BJT.</li> <li>5. Design and testing of Colpitts oscillator, Hartley oscillator using BJT.</li> <li>6. Set up and study the class B push pull power amplifier and calculate the efficiency.</li> <li>7. Design and verify the operation of Op – Amp as a (a) Adder (b) Integrator and (c) Differentiator.</li> <li>8. Design and realize Schmitt trigger circuit using an Op – Amp for desired upper trigger point (UTP) and lower trigger point (LTP).</li> <li>9. Design and verify a Precision full wave rectifier.</li> <li>10. Design of Monostable and Astable multivibrator using 555 Timer.</li> <li>11. Design and realization of R – 2R ladder DAC.</li> <li>12. Design of Fixed voltage power supply (voltage regulator) using IC regulator 78 series.</li> </ol> |
| <b>Course Outcomes:</b> After studying this laboratory course, students will be able to: <ul style="list-style-type: none"> <li>• Differentiate the various diode clipping and clamping circuits.</li> <li>• Plot the transfer and drain characteristics of JFET and MOSFET.</li> <li>• Design and demonstrate the BJT amplifier, Power amplifier and Oscillator circuits and evaluate their performance.</li> <li>• Design and demonstrate the Adder, Differentiator, Integrator, R-2R ladder DAC, Precision full wave rectifier and Schmitt trigger circuit using Op-Amp.</li> <li>• Design and demonstrate the Monostable and Astable multivibrator using 555 Timer.</li> <li>• Design and construct the fixed voltage power supply using IC regulator</li> </ul>   |

| <b>Course Objectives:</b> This laboratory course enables students to get practical experience in design, realization and verification of <ul style="list-style-type: none"> <li>• Demorgan’s Theorem, SOP, POS forms</li> <li>• Full/Parallel Adders, Subtractors and Magnitude Comparator</li> <li>• Multiplexer , Demultiplexers, encoder and Decoders applications</li> <li>• Flip-Flops, Shift registers and Counters</li> </ul> |          |            |    |
| <b>Note:</b> <ul style="list-style-type: none"> <li>• Use discrete components to test and verify the logic gates. The IC numbers given are suggestive. Any equivalent IC can be used.</li> </ul>   |          |            |    |

- For experiment No. 11 any open source or licensed simulation tool may be used.

**List of Experiments:**

1. Verify
  - (a) Demorgan's Theorem for 2 variables.
  - (b) The sum-of product and product-of-sum expressions using universal gates.
2. Design and implement
  - (a) Half Adder.
  - (b) Full Adder.
  - (c) Full subtractor.
3. Design and implement 4-bit Parallel Adder/ Subtractor using IC 7483.
4. Design and Implementation of 4-bit Magnitude Comparator using IC 7485.
5. Realize 4:1 Multiplexer and 1:4 Demultiplexer using gates.
6. Realize 3:8 decoders and 8:3 encoders.
7. Realize JK, D & T Flip-Flops using NAND Gates
8. Realize the following shift registers using IC7474/IC 7495
  - (a) SISO (b) SIPO (c) PISO (d) PIPO
9. Realize Ring and Johnson counter.
10. Realize Mod-N Asynchronous and Mod-N Synchronous counter.
11. Simulate Full- Adder and Mod-8 Synchronous UP/DOWN Counter using simulation tool.

**Course Outcomes:** After studying this course, the students will be able to:

- Demonstrate the truth table of various expressions and combinational circuits using logic gates.
- Design and test various combinational circuits such as adders, subtractors, comparators, multiplexers.
- Realize Boolean expression using decoders.  
Construct and test flips-flops, counters and shift registers.

| <b>List of Experiments:</b>  |          |            |    |

1. Measurements of DC circuits.
2. Study of Mesh Analysis & Node Analysis.
3. Realization & verification of Superposition theorem
4. Realization & verification of Reciprocity theorem
5. Realization & verification of Thevenin 's & Norton's theorem
6. Realization & verification of Maximum power transfer theorem
7. Analysis of series resonance.
8. Analysis of parallel resonance.
9. Determination transient behavior of RC circuits.
10. Determination transient behavior of RL circuits.
11. Determination of transient behavior of RLC circuits.
12. Study of Z & Y parameters of two port network parameters.

**Course Outcomes:** After studying this course, students will be able to:

- Understand the basic concepts, basic laws and methods of analysis of DC and AC networks.
- Reducing the complexity of the network using different transformation and shifting methods. Solve complex electric circuit using network theorems.
- Discuss resonance in series and parallel circuits.
- Discuss the importance of initial conditions and their evaluation.
- Understand the performance of two port networks.

**CREDITS-04**

**Course Objectives** The objectives of the course is to enable students to:

- Design simple systems for generating and demodulating AM, DSB, SSB and VSB signals. Understand the concepts in Angle modulation for the design of communication systems.
- Design simple systems for generating and demodulating frequency modulated signals.
- Analyze pulse modulation and sampling techniques. .
- Understand the mathematical representation of signal, symbol, noise and channels.
- Compute performance parameters and mitigate for these parameters in corrupted and distorted channel conditions.

| <b>Module -1</b>  | <b>Teaching Hours</b> |
|---|-----------------------|
| <p><b>Amplitude Modulation:</b> Amplitude Modulation, Virtues, Limitations, and Modifications of Amplitude Modulation &amp; Double Sideband-Suppressed Carrier Modulation(with derivation), Costas Receiver, Quadrature-Carrier Multiplexing, Single-Sideband Modulation and Vestigial Sideband Modulation (without derivation). (Text 1: 3.1 to 3.7), Signal to noise ratios, Noise in AM receivers using Envelope detection (Text 1: 9.2, 9.5).</p> <p><b>Angle Modulation:</b> Basic Definitions, Narrowband frequency modulation, generation of FM waves, Demodulation of FM signal using frequency discriminator (Text 1: 4.1, 4.4, 4.7, 4.8 ), Detection of Frequency modulation, FM pre-emphasis and De-emphasis (Text 1: 9.7,9.8 ).</p> | 10 Hours              |

|   |          |
|---|----------|
| <b>RBT: L1,L2</b>   |          |
| <b>Module -2</b>  |          |
| <b>Pulse Modulation-Transition From Analog To Digital Communications:</b> Sampling process, Pulse Amplitude Modulation, Pulse position modulation, Completing the Transition from analog to digital, Quantization process, Pulse code modulation (PCM), Delta modulation, Differential pulse code modulation, Line codes(Text 1: 5.1to5.9 ).  | 10 Hours |
| <b>RBT: L1,L2,L3</b>  |          |
| <b>Module -3</b>  |          |
| <b>Baseband Data Transmission:</b> Baseband transmission of digital data, The inter symbol interference problem, The Nyquist channel, Baseband transmission of M-ary data, The eye pattern (Text 1: 6.1 to 6.6).  | 10 Hours |
| <b>RBT: L1,L2,L3</b>  |          |
| <b>Module -4</b>  |          |
| <b>Digital Band pass Modulation Techniques:</b> Binary amplitude shift keying, Phase shift Keying, Frequency shift keying, Summary of three binary signaling schemes, Non coherent digital modulation schemes, M-ary Digital modulation scheme, Mapping of digitally modulated waveform onto constellations of signal point(Text 1: 7.2 to 7.8 ), Bit Error Rate, Optimum Detection of BPSK, Optimum Detection of Binary FSK (Text 1: 10.1, 10.4, 10.6 ).   | 10 Hours |
| <b>RBT: L1,L2,L3</b>  |          |
| <b>Module -5</b>  |          |
| <b>Principles of Spread Spectrum:</b> Spread Spectrum Communication Systems: Model of a Spread Spectrum Digital Communication System, Direct Sequence Spread Spectrum Systems, Effect of De-spreading on a narrowband Interference, Probability of error (statement only), Some applications of DS Spread Spectrum Signals, Generation of PN Sequences, Frequency Hopped Spread Spectrum, CDMA based on IS-95 (Text 2: 11.3.1, 11.3.2, 11.3.3, 11.3.4, 11.3.5, 11.4.2).   | 10 Hours |
| <b>RBT: L1,L2,L3</b>  |          |
| <p><b>Course Outcomes:</b> At the end of this course students will demonstrate the ability to</p> <ul style="list-style-type: none"> <li>• Analyze and compare different analog modulation schemes for their efficiency and bandwidth.</li> <li>• Analyze the behavior of a communication system in presence of noise</li> <li>• Investigate pulsed modulation system and analyze their system performance</li> <li>• Analyze different digital modulation schemes and can compute the bit error performance</li> </ul> |          |

### CREDITS-04

**Course objectives:** This course will enable students to:

- Understand the difference between a microprocessor and a microcontroller and embedded microcontrollers.
- Familiarize the basic architecture of 8051 microcontroller.
- Program 8051 microprocessor using assembly level language and C.
- Understand the interrupt system of 8051 and the use of interrupts.
- Understand the operation and use of inbuilt timers/counters and serial port of 8051.
- Interface 8051 to external memory and I/O devices using its I/O ports.

| <b>Module -1</b>  | <b>Teaching Hours</b> |
|---|-----------------------|
| <p><b>8051 Microcontroller:</b> Microprocessor Vs Microcontroller, Embedded System, Embedded Microcontrollers (Text 1). 8051 Architecture- Registers, Pin diagram, I/O ports functions, Internal Memory Organization, External Memory (ROM &amp; RAM) interfacing. (Text 2)</p> <p style="text-align: right;"><b>RBT: L1,L2</b></p>   | 10 Hours              |
| <b>Module -2</b>  |                       |
| <p><b>8051 Instruction Set:</b> Addressing Modes, External Data Transfer Instructions, Logical Instructions, Arithmetic Instructions, Jump &amp; Call Instruction. Time delay Calculation. Simple Assembly Language Program examples (without loops) to use these instructions.(Text 2 &amp; Text 1)</p> <p style="text-align: right;"><b>RBT: L1,L2</b></p>  | 10 Hours              |
| <b>Module -3</b>  |                       |
| <p><b>8051 Stack, I/O Port Interfacing and Programming:</b> 8051 Stack, Stack and Subroutine instructions. Assembly Language Program examples on Subroutine and Involving Loops - Delay Subroutine, Factorial of a number (result maximum 8 bit), Block move without overlap, Addition of N numbers, Picking smallest/largest of N numbers (8 bit). Interfacing simple switch and LED to I/O ports to switch on/off LED with respect to switch status.(Text 1 )</p> | 10 Hours              |

|   |          |
|---|----------|
| <b>RBT: L1,L2,L3</b>  |          |
| <b>Module -4</b>  |          |
| <p><b>8051 Timers and Serial Port:</b> 8051 Timers and Counters – Operation and Assembly Language Programming to generate a pulse using Mode-1 and a square wave using Mode-2 on a port pin. 8051 Serial Communication- Basics of Serial Data Communication, RS-232 Standard, 9 pin RS232 signals, Simple Serial Port Programming in Assembly and C to transmit a message and to receive data serially. (Text 1)</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>   | 10 Hours |
| <b>Module -5</b>  |          |
| <p><b>8051 Interrupts and Interfacing Applications:</b> 8051 Interrupts basics, Programming Timer Interrupt, Programming External Interrupts, Programming Serial Communication Interrupt, Interrupt priority, 8051 C Programming to generate a square waveform on a port pin using a Timer Interrupt. Interfacing 8051 to LCD, Keyboard Interfacing, ADC-0804, DAC-0808 &amp; Stepper motor and their 8051 Assembly Language Interfacing Programming. (Text 1)</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>   | 10 Hours |
| <p><b>Course outcomes:</b> At the end of the course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the difference between Microprocessors &amp; Microcontrollers, Architecture of 8051 Microcontroller, and Interfacing of 8051 to External Memory and Instruction set of 8051.</li> <li>• Write 8051 Assembly Level Programs using 8051 Instruction set.</li> <li>• Explain the Interrupt System, Operation of Timers/Counters and Serial port of 8051.</li> <li>• Write 8051 Assembly Language Program to generate timings and waveforms using 8051 Timers, to send &amp; receive serial data using 8051 serial port and to generate an external interrupt using a switch.</li> <li>• Write 8051 C programs to generate square wave on 8051 I/O port pin using interrupt and to send &amp; receive serial data using 8051 serial port.</li> <li>• Interface simple switches, simple LEDs, ADC 0804, LCD and Stepper Motor to 8051 using 8051 I/O ports.</li> </ul> |          |
| <p><b>Text Books:</b></p> <ol style="list-style-type: none"> <li>1. “The 8051 Microcontroller and Embedded Systems – using Assembly and C”, Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay; PHI, 2006 / Pearson, 2006.</li> <li>2. “The 8051 Microcontroller”, Kenneth J. Ayala, 3<sup>rd</sup> Edition, Thomson /Cengage Learning.</li> </ol>  |          |

| <b>CREDITS-04</b>   |        |            |                       |
| <p><b>Course Objectives:</b> This course will enable students to:</p> <ol style="list-style-type: none"> <li>1. Understand the classification of signals into different categories based on their properties. Explain basic operations on signals and properties of systems.</li> <li>2. Use convolution in both continuous and discrete domain for the analysis of systems given the impulse response of a system.</li> <li>3. Evaluate response of a given linear time invariant system and Fourier representation of Periodic Signals.</li> <li>4. Apply continuous time Fourier transform representation and discrete time Fourier transform representation to study signals and linear time invariant systems.</li> <li>5. Use Z-transform and properties of Z transform for the analysis of discrete time systems.</li> </ol> |        |            |                       |
| <b>Module -1</b>  |        |            | <b>Teaching Hours</b> |
| <p><b>Introduction and Classification of signals:</b> Definition of signal and systems, communication and control systems as examples. Classification of signals. Basic Operations on signals: Amplitude scaling, addition, multiplication, differentiation, integration, time scaling, time shift and time reversal. Elementary signals/Functions: Exponential, sinusoidal, step, impulse and ramp functions. Expression of triangular, rectangular and other waveforms interms of elementary signals.</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>  |        |            | 10 Hours              |
| <b>Module -2</b>  |        |            |                       |
| <p><b>System Classification and properties:</b> Linear-nonlinear, Time variant-invariant, causal-noncausal, static-dynamic, stable-unstable, invertible.</p> <p><b>Time domain representation of LTI System:</b> Impulse response, convolution sum, convolution integral. Computation of convolution sum and convolution integral using graphical method for unit step and unit step, unit step and exponential, exponential and exponential, unit step and rectangular, and rectangular and rectangular. LTI system Properties interms of impulse response: System interconnection, Memoryless, Causal, Stable, Invertible and Deconvolution, and step response.</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>  |        |            | 10 Hours              |
| <b>Module -3</b>  |        |            |                       |
| <p><b>Time domain representation of LTI System (Cont.):</b> Differential &amp; Difference Equation representation of LTI systems: Solution for Differential &amp; Difference equations. Fourier Representation of Periodic Signals: Orthogonality of complex sinusoids, CTFS properties (No derivation) and basic problems.</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>  |        |            | 10 Hours              |

| <b>Module -4</b>   |          |
|--|----------|
| <p><b>Fourier Representation of aperiodic Signals:</b> Introduction to Fourier Transform &amp; DTFT, Definition and basic problems. Properties of Fourier Transform: Periodicity, Linearity, Symmetry, Time shift, Frequency shift, Scaling, Differentiation and Integration, Convolution and Modulation, Parsevals relationships and Duality.</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>  | 10 Hours |
| <b>Module -5</b>   |          |
| <p><b>Z-Transforms:</b> Z transforms, properties of the region of convergence, properties of the Z-transform, Inverse Z-transform, Causality and stability, Transform analysis of LTI systems.</p> <p style="text-align: right;"><b>RBT: L1,L2,L3</b></p>  | 10 Hours |
| <p><b>Course outcomes:</b> After studying this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Classify the signals as continuous/discrete, periodic/aperiodic, even/odd, energy/power and deterministic/random signals.</li> <li>• Determine the linearity, causality, time-invariance and stability properties of continuous and discrete time systems.</li> <li>• Compute the response of a Continuous and Discrete LTI system using convolution integral and convolution sum.</li> <li>• Determine the spectral characteristics of continuous and discrete time signal using Fourier analysis.</li> <li>• Compute Z-transforms, inverse Z- transforms and transfer functions of complex LTI systems.</li> </ul> |          |

| <b>Course Objectives:</b> This course will enable students to:   |        |            |                       |
| <ul style="list-style-type: none"> <li>• Understand the frequency domain sampling and reconstruction of discrete time signals.</li> <li>• Study the properties and the development of efficient algorithms for the computation of DFT.</li> <li>• Learn the procedures to design of IIR filters from the analog filters using impulse invariance and bilinear transformation.</li> <li>• Study the different windows used in the design of FIR filters and design appropriate filters based on the specifications.</li> <li>• Realization of FIR and IIR filters in different structural forms.</li> </ul> |        |            |                       |
| <b>Module -1</b>   |        |            | <b>Teaching Hours</b> |
| <b>Discrete Fourier Transforms (DFT):</b> Frequency domain sampling and reconstruction of discrete time signals. DFT as a linear transformation, its relationship with other transforms. Properties of DFT, multiplication of two DFTs- the circular convolution.<br><b>(Text 1 &amp; Ref 1)</b> <span style="float: right;"><b>RBT: L1,L2,L3</b></span>   |        |            | 10 Hours              |
| <b>Module -2</b>   |        |            |                       |
| Additional DFT properties, Application of DFT: use of DFT in linear filtering, overlap-save and overlap-add method. Fast-Fourier-Transform (FFT) algorithms: Direct computation of DFT, need for efficient computation of the DFT (FFT algorithms).<br><b>(Text 1 &amp; Ref 1)</b> <span style="float: right;"><b>RBT: L1,L2,L3</b></span>   |        |            | 10 Hours              |
| <b>Module -3</b>   |        |            |                       |
| Radix-2 FFT algorithm for the computation of DFT and IDFT–decimation-in-time and decimation-in-frequency algorithms. Goertzel algorithm and chirp-z transform.<br><b>(Text 2 &amp; Ref 2)</b> <span style="float: right;"><b>RBT: L1,L2,L3</b></span>  |        |            | 10 Hours              |
| <b>Module -4</b>   |        |            |                       |
| Structure for IIR Systems: Direct form, Cascade form, Parallel form structures. IIR filter design: Characteristics of commonly used analog filter – Butterworth and Chebyshev filters, analog to analog frequency transformations. Design of IIR Filters from analog filter using Butterworth filter: Impulse invariance, Bilinear transformation.<br><b>(Text3&amp; Ref 3)</b> <span style="float: right;"><b>RBT: L1,L2,L3</b></span>  |        |            | 10 Hours              |
| <b>Module -5</b>   |        |            |                       |
| FIR filter design: Magnitude and frequency response of Rectangular, Hamming, Hanning, Bartlett windows. Introduction to FIR filters, design of FIR filters using window method, Structure for FIR Systems: Direct form, Linear Phase, Frequency sampling structure, Lattice structure.<br><b>(Text3&amp; Ref 3)</b> <span style="float: right;"><b>RBT: L1,L2,L3</b></span>  |        |            | 08 Hours              |
| <b>Course Outcomes:</b> After studying this course, students will be able to:  |        |            |                       |
| <ul style="list-style-type: none"> <li>• Determine response of LTI systems using time domain and DFT techniques.</li> <li>• Compute DFT of real and complex discrete time signals.</li> <li>• Computation of DFT using FFT algorithms and linear filtering approach.</li> <li>• Digital filter design and realize using digital computations.</li> </ul>   |        |            |                       |

| Magnetic flux and magnetic flux density, Scalar and Vector Magnetic Potentials. Faraday's law, displacement current, Maxwell's equations in point form, Maxwell's equations in integral form. Wave propagation in free space, Dielectrics, Poynting's Theorem and wave power (8.5,8.6,10.1,10.2,10.3,10.4,12.1,12.2,12.3)  |        |            | 10 Hours              |
| <b>RBT: L1,L2,L3</b>   |        |            |                       |
| <b>Module -4</b>   |        |            |                       |
| Antenna Basics: Introduction, Basic Antenna Parameters, Patterns, Beam Area, Radiation Intensity, Beam Efficiency, Directivity and Gain, Antenna Apertures, Effective Height, Bandwidth, Radio Communication Link, Antenna Field Zones & Polarization. Point Sources and Arrays: Introduction, Point Sources, Power Patterns, Power Theorem, Radiation Intensity, Field Patterns, Phase Patterns, Arrays of Two Isotropic Point Sources, Pattern Multiplication, Linear Arrays of n Isotropic Point Sources of equal Amplitude and Spacing. (2.1-2.11,2.13,2.15,5.1-5.10,5.13 of Text 2)   |        |            | 10 Hours              |
| <b>RBT: L1,L2,L3</b>   |        |            |                       |
| <b>Module -5</b>   |        |            |                       |
| Electric Dipoles: Introduction, Short Electric Dipole, Fields of a Short Dipole (General and Far Field Analyses), Radiation Resistance of a Short Dipole, Thin Linear Antenna  |        |            | 10 Hours              |

(Field Analyses), Radiation Resistances of Lambda/2 Antenna(No derivations for fields and radiation resistance).Helical Geometry, Practical Design Considerations of Helical Antenna, Yagi-Uda array, Parabola General Properties, Log Periodic Antenna. Microstrip Antennas  
(6.1-6.6,8.3,8.5,8.8,9.5,11.7,14.1-14.5,14.13 of Text 2)**RBT: L1,L2,L3**

**Course Outcomes:** After studying this course, students will be able to:

- Evaluate problems on electric field due to point, linear, charges by applying conventional methods or by Gauss law.
- Apply Maxwell's equation for time varying fields, EM waves in free space.
- Evaluate power associated with EM waves using Poynting theorem.
- Classify different types of antennas.
- Define and illustrate various types of array antennas.
- Design antennas like Yagi-Uda, Helical antennas and other broad band antennas.

Von-Neumann & Harvard CPU architecture and CISC & RISC CPU architecture.

**RBT: L1,L2,L3**

**Course Outcomes:** At the end of the course students will be able to:

- Explain the History of evolution of Microprocessors, Architecture of 8086, 8088, 8087, CISC & RISC, Von-Neumann & Harvard CPU architecture.
- Write 8086 Assembly level programs using the 8086 instruction set.
- Write modular programs using procedures and macros.
- Write 8086 Stack and Interrupts programming.
- Interface 8086 to Static memory chips and 8255, 8254, 0808 ADC, 0800 DAC, Keyboard, Display and Stepper motors.
- Use INT 21 DOS interrupt function calls to handle Keyboard and Display

## ELECTROMAGNETIC WAVES AND ANTENNAS LAB

[As per Choice Based Credit System (CBCS) Scheme]

SEMESTER-V

|                             |         |            |    |
|-----------------------------|---------|------------|----|
| Subject Code                | 18ECL56 | CIE Marks  | 50 |
| Number of Lecture Hour/Week | 2P      | SEE Marks  | 50 |
| Total Number of Hours       | 24      | Exam Hours | 03 |

### CREDITS-01

**Course Objectives:** This course will enable students to:

- Radiation pattern of antennas.
- Determining gain and directivity of a given antenna.
- Working of Klystron source.
- Study of directional coupler, Microstrip ring resonator.

**List of Experiments:**

1. Measurement of frequency, guide wavelength, power, VSWR and attenuation in microwave test bench.
2. Measurement of directivity and gain of microstrip dipole
3. Measurement of directivity and gain of Yagi antennas.
4. Measurement of directivity and gain of horn antennas.
5. Impedance measurements of Horn/Yagi/dipole/Parabolic antennas
6. Determination of Coupling and isolation characteristics of microstrip directional coupler.
7. Resonance characteristics of microstrip ring resonator and computation of dielectric constant of the substrate.
8. Power division and isolation of microstrip power divider.

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Plot the radiation pattern of antennas.
- Design antennas like Yagi-Uda, Helical antennas and other broad band antennas.
- Realize characteristics of directional coupler, Microstrip ring resonator, Isolator and Power divider.

## HDL LABORATORY

[As per Choice Based Credit System (CBCS) Scheme]

### SEMESTER-V

|                             |          |            |    |
|-----------------------------|----------|------------|----|
| Subject Code                | 18ECL571 | CIE Marks  | 50 |
| Number of Lecture Hour/Week | 2P       | SEE Marks  | 50 |
| Total Number of Hours       | 24       | Exam Hours | 03 |

### CREDITS-01

**Course Objectives:** This course will enable students to:

- Familiarize with the CAD tool to write HDL programs.
- Understand simulation and synthesis of digital design.
- Program FPGAs/CPLDs to synthesize the digital designs.
- Interface hardware to programmable ICs through I/O ports.
- Choose either Verilog or VHDL for a given Abstraction level.

**Note:** Programming can be done using any compiler. Download the programs on a FPGA/CPLD board and performance testing may be done using 32 channel pattern generator and logic analyzer apart from verification by simulation with tools such as Altera/Modelsim or equivalent.

### List of Experiments:

#### Part-A: PROGRAMMING

1. Write Verilog code to realize all the logic gates
2. Write a Verilog program for the following combinational designs
  - a. 2 to 4 decoder
  - b. 8 to 3 (encoder without priority & with priority)
  - c. 8 to 1 multiplexer.
  - d. 4 bit binary to gray converter
  - e. Multiplexer, de-multiplexer, comparator.
3. Write a Verilog code to describe the functions of a Full Adder using
4. three modeling styles.
5. Write a Verilog code to model 32 bit ALU using the schematic diagram shown

ALU should use combinational logic to calculate an output based on the four bit op-code input. ALU should pass the result to the out bus when enable line in high, and tri-state the out bus when the enable line is low.

ALU should decode the 4 bit op-code according to the example given below.

| OPCODE | ALU OPERATION |
|--------|---------------|
| 1.     | A+B           |
| 2.     | A-B           |
| 3.     | A Complement  |
| 4.     | A*B           |
| 5.     | A AND B       |
| 6.     | A OR B        |
| 7.     | A NAND B      |
| 8.     | A XNOR B      |

6. Develop the Verilog code for the following flip-flops, SR, D, JK and T.

7. Design a 4 bit binary, BCD counters (Synchronous reset and Asynchronous
8. reset) and —any sequencell counters, using Verilog code.

**Part–B: INTERFACING (at least four of the following must be covered using HDL)**

9. Write HDL code to display messages on an alpha numeric LCD display.
10. Write HDL code to interface Hex key pad and display the key code on seven segment display.
11. Write HDL code to control speed, direction of DC and Stepper motor.
12. Write HDL code to accept Analog signal, Temperature sensor and display the data on LCD or Seven segment display.
13. Write HDL code to generate different waveforms (Sine, Square, Triangle, Ramp etc.,) using DAC - change the frequency.
14. Write HDL code to simulate Elevator operation.

**Course Outcomes:** At the end of this course, students should be able to:

- Write the HDL programs to simulate Combinational circuits in Dataflow, Behavioral and Gate level Abstractions.
- Describe sequential circuits like flip flops and counters in Behavioral description and obtain simulation waveforms.
- Synthesize Combinational and Sequential circuits on programmable ICs and test the hardware.
- Interface the hardware to the programmable chips and obtain the required output.

**MICROPROCESSOR LABORATORY**  
[As per Choice Based Credit System (CBCS) Scheme]  
**SEMESTER-V**

|                             |          |            |    |
|-----------------------------|----------|------------|----|
| Subject Code                | 18ECL572 | CIE Marks  | 50 |
| Number of Lecture Hour/Week | 2P       | SEE Marks  | 50 |
| Total Number of Hours       | 24       | Exam Hours | 03 |

**CREDITS-01**

**Course Objectives:** This course will enable students to:

- Get familiarize with 8086 instructions and DOS 21H interrupts and function calls. Develop and test assembly language programs to use instructions of 8086.
- Get familiarize with interfacing of various peripheral devices with 8086 microprocessor for simple applications.

**List of Experiments:**

**1. Programs involving: Data transfer instructions like:**

- i) Byte and word data transfer indifferent addressing Modes
- ii) Block move (with and without overlap)
- iii) Block interchange

**2. Programs involving: Arithmetic & logical operations like:**

- i) Addition and Subtraction of multi precision no,s.
- ii) Multiplication and Division of signed and unsigned Hexadecimal no,s.
- iii) ASCII adjustment instructions.
- iv) Code conversions.

**3. Programs involving: Bit manipulation instructions like checking:**

- i) Whether given data is positive or negative
- ii) Whether given data is odd or even
- iii) Logical 1"s and 0"s in a givendata
- iv) 2 out 5 code
- v) Bit wise and nibble wise palindrome.

**4. Programs involving: Loop instructions like**

- i) Arrays: addition/subtraction of N nos., Finding largest and smallest nos., Ascending and descending order.
- ii) Two application programs using Procedures and Macros (Subroutines).

**5. Programs involving**

String manipulation like string transfer, string reversing, searching for a string.

**6. Programs involving**

Programs to use DOS interrupt INT 21h Function calls for Reading a Character from keyboard, Buffered Keyboard input, Display of character/ String on console.

**7. Interfacing Experiments:**

Experiments on interfacing 8086 with the following interfacing modules through DIO (Digital Input/Output - PCI bus compatible card / 8086 Trainer )

1. Matrix keyboard interfacing
2. Seven segment display interface
3. Logical controller interface
4. Stepper motor interface
5. ADC and DAC Interface (8 bit)
6. Light dependent resistor ( LDR ), Relay and Buzzer Interface to make light operated switches

**Course outcomes:** On the completion of this laboratory course, the students will be able to:

- Program a microprocessor to perform arithmetic, logical and data transfer applications.
- Understand assembler directives, DOS Interrupts, branch and loop operations.
- Interface a microprocessor to various devices for simple applications.
- Effectively utilize microprocessor peripherals.
- Utilize procedures and macros for modular programming.

| <b>Course Objectives:</b> This course will enable students to: <ul style="list-style-type: none"> <li>• Understand the architectural features and instruction set of 32 bit microcontroller ARM Cortex M3.</li> <li>• Program ARM Cortex M3 using the various instructions and C language for different applications.</li> <li>• Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.</li> <li>• Develop the hardware software co-design and firmware design approaches.</li> <li>• Explain the need of real time operating system for embedded system applications.</li> </ul>                          |         |            |                       |
| <b>Module -1</b>   |         |            | <b>Teaching Hours</b> |
| <b>Embedded System Components:</b> Embedded Vs General computing system, Classification of Embedded systems, Major applications and purpose of ES. Core of an Embedded System including all types of processor/controller, Memory, Sensors, Actuators, LED, 7 segment LED display, Optocoupler, Relay, Piezo buzzer, Push button switch, Communication Interface (onboard and external types), Embeddedfirmware, Other system components. (Text 1: All the Topics from Ch-1 and Ch-2, excluding 2.3.3.4 (stepper motor), 2.3.3.8 (keyboard) and 2.3.3.9 (PPI) sections).   |         |            | 08 Hours              |
| <b>RBT: L1,L2</b>  |         |            |                       |
| <b>Module -2</b>   |         |            |                       |
| <b>Embedded System Design Concepts:</b> Characteristics and Quality Attributes of Embedded Systems, Operational and non-operational quality attributes, Embedded Systems-Application and Domain specific, Hardware Software Co-Design and Program Modelling (excluding UML), Embedded firmware design and development (excluding C language). (Text 1: Ch-3, Ch-4, Ch-7 (Sections 7.1, 7.2 only), Ch-9 (Sections 9.1, 9.2, 9.3.1, 9.3.2 only).   |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>   |         |            |                       |
| <b>Module -3</b>   |         |            |                       |
| <b>RTOS and IDE for Embedded System Design:</b> Operating System basics, Types of operating systems, Task, process and threads (Only POSIX Threads with an example program), Thread preemption, Preemptive Task scheduling techniques, Task Communication, Task synchronization issues – Racing and Deadlock, How to choose an RTOS, Integration and testing of Embedded hardware and firmware, Embedded system Development Environment – Block diagram (excluding Keil), Disassembler/decompiler, simulator, emulator and debugging (Text 1: Ch-10 (Sections 10.1, 10.2, 10.3, 10.5.2 , 10.7, 10.8.1.1, 10.8.1.2,10.10 only), Ch 12, Ch-13 (a block diagram before 13.1, 13.3, 13.4 only) |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>   |         |            |                       |
| <b>Module -4</b>   |         |            |                       |
| <b>ARM-32 bit Microcontroller:</b> Thumb-2 technology and applications of ARM, Architecture of ARM Cortex M3, Various Units in the architecture, Debugging support,  |         |            | 08 Hours              |

|  |                                      |
|--|--------------------------------------|
| General Purpose Registers, Special Registers, exceptions, interrupts, stack operation, reset sequence (Text 2: Ch 1, 2, 3)   | <b>RBT: L1,L2,L3</b>                 |
| <b>Module -5</b>   |                                      |
| <b>ARM Cortex M3 Instruction Sets and Programming:</b> Assembly basics, Instruction list and description, Useful instructions, Memory mapping, Bit-band operations and CMSIS, Assembly and C language Programming (Text 2: Ch-4, Ch-5, Ch-10 (10.1, 10.2, 10.3, 10.5 only)   | 08 Hours<br><br><b>RBT: L1,L2,L3</b> |
| <p><b>Course outcomes:</b> At the end of the course, the students will be able to:</p> <ul style="list-style-type: none"> <li>• Describe the architectural features and instructions of 32 bit microcontroller ARM Cortex M3.</li> <li>• Apply the knowledge gained for Programming ARM Cortex M3 for different applications.</li> <li>• Understand the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.</li> <li>• Develop the hardware /software co-design and firmware design approaches.</li> <li>• Explain the need of real time operating system for embedded system applications.</li> </ul> |                                      |
| <p><b>Text Books:</b></p> <ol style="list-style-type: none"> <li>1. Shibu K V, —Introduction to Embedded Systems, Tata McGraw Hill Education Private Limited, 2nd Edition.</li> <li>2. | <b>Course outcomes:</b> After studying this course, students will be able to:   |         |            |                       |

- Explain the goals, structure, operation and types of operating systems.
- Apply scheduling techniques to find performance factors.
- Explain organization of file systems and IOCS.
- Apply suitable techniques for contiguous and non-contiguous memory allocation.
- Describe message passing, deadlock detection and prevention methods..

**Text Books:**

Operating Systems – A concept based approach, by Dhamdare, TMH, 2<sup>nd</sup> edition.

| <p><b>Course Objectives:</b> This course will enable students to:</p> <ul style="list-style-type: none"> <li>• Understand an overview of IoT, M2M communication and design principles.</li> <li>• Understand the internet connectivity principles, protocols, data collection, storage and the concept of cloud computing.</li> <li>• Know about IoT Privacy, Security and Vulnerabilities Solutions.</li> <li>• Understand the role of IoT in various domains of applications.</li> <li>• Understand the IoT physical devices and Python programming concept.</li> </ul>  |        |            |                       |
| <b>Module -1</b>   |        |            | <b>Teaching Hours</b> |
| <p><b>Internet of Things: An overview</b><br/>Internet of Things, IoT Conceptual Framework, IoT Architectural View, Technology Behind IoT, Sources of IoT, M2M Communication, Examples of IoT.</p> <p><b>Design Principles for Connected Devices:</b><br/>Introduction, IoT/M2M Systems Layers and Design Standardization, Data Enrichment, Data Consolidation and Device Management at Gateway.</p> <p><b>Design Principles for Web Connectivity:</b><br/>Web Communication Protocols for Connected Devices, Message Communication Protocols for connected devices.(Chapter 1,2 &amp;3 from Textbook 1)</p> <p style="text-align: right;"><b>RBT: L1,L2</b></p> |        |            | 08 Hours              |
| <b>Module -2</b>   |        |            |                       |
| <p><b>Internet Connectivity Principles:</b> Internet Connectivity, Internet-Based Communication, IP Addressing in the IoT, Application Layer Protocols: HTTP, HTTPS, FTP, Telnet and Others.</p> <p><b>Data Collection, Storage and Computing Using a Cloud Platform:</b> Introduction, Cloud Computing Paradigm for Data Collection, Storage and Computing. Everything as a Service and Cloud Service Models. IoT Cloud-Based Services Using the Xively, Nimbits and Other Platforms. (Chapter 4 &amp; 6 from textbook 1)</p> <p style="text-align: right;"><b>RBT: L1,L2</b></p>   |        |            | 08 Hours              |
| <b>Module -3</b>   |        |            |                       |
| <p><b>IoT Privacy, Security and Vulnerabilities Solutions:</b><br/>Introduction, Vulnerabilities, Security Requirements and Threat Analysis, Use Cases and Misuse Cases, IoT Security Tomography and Layered Attacker Model, Identity Management and Establishment, Access Control and Secure Message Communication. Security Models, Profiles and Protocols for IoT. (Chapter 10 from Textbook 1)</p> <p style="text-align: right;"><b>RBT: L1,L2</b></p>   |        |            | 08 Hours              |
| <b>Module -4</b>   |        |            |                       |
| IoT applications for smart and connected cities-Driverless vehicles, Crowdsensing,   |        |            |                       |

|  |          |
|--|----------|
| Smart buildings, Smart campuses, Smart grid. Internet of things for connected homes- Smart connected home stackholders, Smart home connected systems. IoT in Smart Ambulance and Emergency Medicine- IoT in Emergency medicine. ( Textbook 2)<br><b>RBT: L1,L2,L3</b>  | 08 Hours |
| <b>Module -5</b>   |          |
| <p><b>IoT Systems- Logical Design using Python:</b><br/>Introduction, Installing Python, Python Data Types and Data Structures, Control Flow, Functions, Modules, Packages, File handling, date/ Time operations, Classes, Python Packages of Interest for IoT.</p> <p><b>IoT Physical Devices &amp; Endpoints:</b><br/>Exemplary Device: Raspberry Pi, About the Board, Linux on Raspberry Pi, Raspberry Pi Interfaces. Programming Raspberry Pi with Python, Arduino, About the board.(Chapter 6&amp;7 of Textbook 3)<br/><b>RBT: L1,L2,L3</b></p> | 08 Hours |
| <p><b>Course outcomes:</b> After studying this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the architectural view of IoT, M2M communication, Examples of IoT</li> <li>• Use of cloud storage in the IoT application.</li> <li>• Solve the security issues faced by the students in the IoT application.</li> <li>• Design various IoT applications.</li> <li>• Use Python application software in the IoT application development.</li> </ul>   |          |

| Addressing modes, Assembly Language, Basic Input and Output Operations, Stacks and Queues, Subroutines, Additional Instructions ( <b>from 2.4.7 of Chapter 2, except 2.9.3, 2.11 &amp; 2.12 of Text1</b> ).   |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>  |         |            |                       |
| <b>Module -3</b>  |         |            |                       |
| <b>Input/Output Organizations:</b> Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Devices Requests, Direct Memory Access ( <b>up to 4.2.4 and 4.4 except 4.4.1 of Chapter 4 of Text1</b> ).  |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>  |         |            |                       |
| <b>Module -4</b>  |         |            |                       |
| <b>Memory System:</b> Basic Concepts, Semiconductor RAM Memories – Internal organization of memory chips, Static memories, Asynchronous DRAMS, Read Only Memories, Cash Memories, Virtual Memories, Secondary Storage-Magnetic Hard Disks ( <b>5.1, 5.2, 5.2.1, 5.2.2, 5.2.3, 5.3, 5.5 (except 5.5.1 to 5.5.4), 5.7 (except 5.7.1), 5.9, 5.9.1 of Chapter 5 of Text1</b> ).   |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>  |         |            |                       |
| <b>Module -5</b>  |         |            |                       |
| <b>Basic Processing Unit:</b> Some Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hardwired Control, Micro programmed Control( <b> up to 7.5 except 7.5.1 to 7.5.6 of Chapter 7 of Text1</b> )   |         |            | 08 Hours              |
| <b>RBT: L1,L2,L3</b>  |         |            |                       |
| <b>Course outcomes:</b> After studying this course, students will be able to:   |         |            |                       |

- Explain the basic organization of a computer system.
- Describe the addressing modes, instruction formats and program control statement.
- Explain different ways of accessing an input/ output device including interrupts.
- Illustrate the organization of different types of semiconductor and other secondary storage memories.
- Illustrate simple processor organization based on hardwired control and micro programmed control.

- iii) Transient Analysis
  - b. Draw the Layout and verify the DRC, ERC
  - c. Check for LVS
  - d. Extract RC and back annotate the same and verify the Design.
  
3. Design an op-amp with given specification\*\* using given differential amplifier Common source and Common Drain amplifier in library\*\*\* and completing the design flow mentioned below:
  - a. Draw the schematic and verify the following
    - i) DC Analysis
    - ii). AC Analysis
    - iii) Transient Analysis
  - b. Draw the Layout and verify the DRC, ERC
  - c. Check for LVS
  - d. Extract RC and back annotate the same and verify the Design.
  
4. Design a 4 bit R-2R based DAC for the given specification and completing the design flow mentioned using given op-amp in the library\*\*\*.
  - a. Draw the schematic and verify the following
    - i) DC Analysis
    - ii) AC Analysis
    - iii) Transient Analysis
  - b. Draw the Layout and verify the DRC, ERC
  
5. For the SAR based ADC mentioned in the figure below draw the mixed signal schematic and verify the functionality by completing ASIC Design FLOW. [Specifications to GDS-II]

\* An appropriate constraint should be given.

\*\* Appropriate specification should be given.

\*\*\* Applicable Library should be added & information should be given to the Designer.

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Write test bench to simulate various digital circuits.
- Interpret concepts of DC Analysis, AC Analysis and Transient Analysis in analog circuits.
- Design and simulate basic CMOS circuits like inverter, common source amplifier and differential amplifiers.
- Use basic amplifiers and further design higher level circuits like operational amplifier and analog/digital converters to meet desired parameters.
- Use transistors to design gates and further using gates realize shift registers and adders to meet desired parameters.

**EMBEDDED SYSTEM LAB**

[As per Choice Based Credit System (CBCS) Scheme]

**SEMESTER-VI**

|                             |          |            |    |
|-----------------------------|----------|------------|----|

| Total Number of Hours       | 24       | Exam Hours | 03 |

**CREDITS-01****Course Objectives:** This course will enable students to:

- Understand the instruction set of ARM Cortex M3, a 32 bit microcontroller and the software tool required for programming in Assembly and C language.
- Program ARM Cortex M3 using the various instructions in assembly level language for different applications.
- Interface external devices and I/O with ARM Cortex M3.
- Develop C language programs and library functions for embedded system applications.

**List of Experiments:****PART-A:** Conduct the following Study experiments to learn ALP using ARM Cortex M3 Registers using an Evaluation board and the required software tool.

1. ALP to multiply two 16 bit binary numbers.
2. ALP to find the sum of first 10 integer numbers.

**PART-B:** Conduct the following experiments on an ARM CORTEX M3 evaluation board using evaluation version of Embedded 'C' & Keil uVision-4 tool/compiler.

1. Display —Hello World message using Internal UART.
2. Interface and Control a DC Motor.
3. Interface a Stepper motor and rotate it in clockwise and anti-clockwise direction.
4. Interface a DAC and generate Triangular and Square waveforms.
5. Interface a 4x4 keyboard and display the key code on an LCD.
6. Using the Internal PWM module of ARM controller generate PWM and vary its duty cycle.
7. Demonstrate the use of an external interrupt to toggle an LED On/Off.
8. Display the Hex digits 0 to F on a 7-segment LED interface, with an appropriate delay in between.
9. Interface a simple Switch and display its status through Relay, Buzzer and LED.
10. Measure Ambient temperature using a sensor and SPI ADC IC.

**Course Outcomes:** On the completion of this laboratory course, the students will be able to:

- Understand the instruction set of 32 bit microcontroller ARM Cortex M3, and the software tool required for programming in Assembly and C language.
- Develop assembly language programs using ARM Cortex M3 for different applications.
- Interface external devices and I/O with ARM Cortex M3.
- Develop C language programs and library functions for embedded system applications.

| Total Number of Hours         | 24       | Exam Hours | 03 |

**CREDITS-01**

**Course Objectives:**

This course will enable students to:

1. Choose suitable tools to model a network and understand the protocols.
2. Design a suitable network and simulate using a Network simulator tool.
3. Simulate the Sensor networking concepts and protocols using C/C++ programming.
4. List various applications of wireless and for solving wireless sensor network design issues.

**Laboratory Experiments**

**Following Programs can be done using C/C++.**

- 1) Write a program for first come first serve data transmission in WSN.
- 2) Write a program for congestion control for a network using leakage bucket algorithm.
- 3) Write a program for RSA Algorithm to encrypt and decrypt the confidential data for transmission across the network.
- 4) Write a program for Distance vector Hop algorithm Algorithm to find the shortest path between the sensor nodes.
- 5) Write a program to obtain the CRC code for the given data and the generator polynomial. Verify the program without error.
- 6) Write a program to obtain the CRC code for the given data and the generator polynomial. Verify the program with error.

**PART-B**

**Simulation experiments using NS2/ NS3/ OPNET/ NCTUNS/ NetSim/ QualNet or any other equivalent tool.**

Analyze the sensor network by Implementing a point to point network with four nodes and duplex links between them. set the queue size and varying the bandwidth.

- 7) Implement a four node point to point Sensor network with links n0-n2, n1-n2 and n2-n3. Apply TCP agent between n0-n3 and UDP between n1-n3. determine the number of packets sent by TCP/UDP.
- 8) Implementation and create links between the source and destination using both FTP and TCP protocol for WSN.
- 9) create data transmission between the nodes using TCP
- 10) To simulate and study the Distance Vector routing algorithm using simulation.

**Course outcomes:** After studying this course, students will be able to:

1. Implement the routing protocols using C programming.
2. Use the network simulator for learning and practice of networking algorithms.
3. Illustrate the operations of WSN network protocols and algorithms using C programming.
4. Simulate the Sensor network with different configurations to measure the performance parameters.

CREDITS-04

**Course Objectives:** This course will enable students to:

- Understand the layering architecture of OSI reference model and TCP/IP protocol suite.
- Understand the protocols associated with each layer.
- Learn the different networking architectures and their representations.
- Learn the various routing techniques and the transport layer services.

| <b>Modules</b> | <b>Teaching Hours</b> | <b>Revised Bloom's Taxonomy (RBT) Level</b> |
|----------------|-----------------------|---|
|----------------|-----------------------|---|

**Module -1**

|  |  |                 |
|--|--|-----------------|
| <p><b>Introduction:</b> Data Communications: Components, Representations, Data Flow.</p> <p><b>Networks:</b> Physical Structures, Network Types: LAN, WAN, Switching, The Internet.</p> <p><b>Network Models:</b> Protocol Layering: Scenarios, Principles, Logical Connections, TCP/IP Protocol Suite: Layered Architecture, Layers in TCP/IP suite, Description of layers, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing, The OSI Model: OSI Versus TCP/IP.</p> <p>Text 1: 1.1,1.2,1.3,2.1,2.2,2.3.</p> | <b>10 Hours<br/>(Text1&amp; Ref 1)</b> | <b>L1,L2,L3</b> |
|--|--|-----------------|

**Module -2**

|   |  |                 |
|---|--|-----------------|
| <p><b>Data-Link Layer:</b> Introduction: Nodes and Links, Services, Categories' of link, Sublayers, Link Layer addressing: Types of addresses, ARP.</p> <p><b>Data Link Control (DLC):</b> services, Framing, Flow and Error Control, Data Link Layer Protocols: Simple Protocol, Stop and Wait protocol, Piggybacking.</p> <p><b>Media Access Control:</b> Random Access: ALOHA, CSMA, CSMA/CD, CSMA/CA.</p> <p>Controlled Access: Reservation, Polling, Token Passing, Channelization.</p> <p>Text 1: 9.1,9.2,11.1,11.2,12.1,12.2,12.3.</p> | <b>10 Hours<br/>(Text1&amp; Ref 1)</b> | <b>L1,L2,L3</b> |
|---|--|-----------------|

**Module -3**

|   |  |                 |
|---|--|-----------------|
| <p><b>Connecting Devices:</b> Hubs, Switches, Routers. <b>Virtual LANs:</b> Membership, Configuration, Communication between Switches and Routers, Advantages.</p> <p><b>Network Layer:</b> Introduction, Network Layer services: Packetizing, Routing and Forwarding, Other services, Packet Switching: Datagram Approach, Virtual Circuit Approach, IPV4 Addresses: Address Space, Classful Addressing, Classless Addressing, DHCP, Network Address Resolution, Forwarding of IP Packets: Based on destination Address and Label.</p> <p>Text 1: 17.1, 17.2,18.1,18.2,18.4,18.5</p> | <b>10 Hours<br/>(Text1&amp; Ref 1)</b> | <b>L1,L2,L3</b> |
|---|--|-----------------|

|  |  |                         |
|--|--|-------------------------|
| <b>Module -4</b>   |  |                         |
| <p><b>Network Layer Protocols:</b> Internet Protocol (IP): Datagram Format, Fragmentation, Options, Security of IPv4 Datagrams, ICMPv4: Messages, Debugging tools, ICMP checksum.</p> <p>Mobile IP: Addressing, Agents, Three Phases,</p> <p><b>Unicast Routing:</b> Introduction, Routing Algorithms: Distance Vector Routing, Link State Routing, Path vector routing, Unicast Routing Protocol: Internet Structure, Routing Information Protocol, Open Shortest Path First, Border Gateway Protocol Version 4.</p> <p>Text 1: 19.1,19.2,19.3, 20.1,20.2,20.3</p>  | <p><b>10 Hours</b><br/><b>(Text1&amp; Ref 1)</b></p> | <p><b>L1, L2,L3</b></p> |
| <b>Module-5</b>  |  |                         |
| <p><b>Transport Layer:</b> Introduction: Transport Layer Services, Connectionless and Connection oriented Protocols,</p> <p><b>Transport Layer Protocols:</b> Simple protocol, Stop and wait protocol, Go-Back-N Protocol, Selective repeat protocol,</p> <p><b>User Datagram Protocol:</b> User Datagram, UDP Services, UDP Applications, <b>Transmission Control Protocol:</b> TCP Services, TCP Features, Segment, Connection, State Transition diagram, Windows in TCP, Flow control, Error control, TCP congestion control.</p> <p>Text 1: 23.1, 23.2,24.1, 24.2, 24.3</p>  | <p><b>08 Hours</b><br/><b>(Text1&amp; Ref 1)</b></p> | <p><b>L1,L2,L3</b></p>  |
| <p><b>Course Outcomes:</b> At the end of the course, the students will be able to:</p> <ul style="list-style-type: none"> <li>• Identify the protocols and services of Data link layer.</li> <li>• Identify the protocols and functions associated with the transport layer services.</li> <li>• Describe the layering architecture of computer networks and distinguish between the OSI reference model and TCP/IP protocol suite.</li> <li>• Distinguish the basic network configurations and standards associated with each network.</li> <li>• Construct a network model and determine the routing of packets using different routing algorithms.</li> </ul> |  |                         |
| <p><b>Text Books:</b></p> <p>1. Data Communications and Networking , Forouzan, 5th Edition, McGraw Hill, 2016<br/>ISBN: 1-25-906475-3</p>  |  |                         |
| <p><b>Reference Books:</b></p> <p>1. Computer Networks, James J Kurose, Keith W Ross, Pearson Education, 2013, ISBN: 0-273-76896-4<br/>2. Introduction to Data Communication and Networking, Wayarles Tomasi, Pearson Education, 2007, ISBN:0130138282</p>   |  |                         |

| <p><b>Course Objectives</b> The objectives of the course is to enable students to:</p> <ul style="list-style-type: none"> <li>• Understand the working of various power devices.</li> <li>• Study and analysis of thyristor circuits with different triggering techniques.</li> <li>• Learn the applications of power devices in controlled rectifiers, converters and inverters.</li> <li>• Study of power electronics circuits under different load conditions.</li> </ul> |         |                       |   |
| <b>Modules</b>   |         | <b>Teaching Hours</b> | <b>Revised Bloom's Taxonomy (RBT) Level</b> |
| <b>Module -1 : Introduction &amp; Power Transistors</b>  |         |                       |   |
| Introduction - Applications of Power Electronics, Power Semiconductor Devices, Control Characteristics of Power Devices, types of Power Electronic Circuits.<br>Power Transistors: Power BJTs: Steady state characteristics. Power MOSFETs: device operation, switching characteristics, IGBTs: device operation, output and transfer characteristics. (Text 1)  |         | <b>08 Hours</b>       | <b>L1,L2</b>                                |
| <b>Module -2 : Thyristors</b>  |         |                       |   |
| Thyristors - Introduction, Principle of Operation of SCR, Static Anode-Cathode Characteristics of SCR, Two transistor model of SCR, Gate Characteristics of SCR, Turn-ON Methods, Turn-OFF Mechanism, Turn-OFF Methods: Natural and Forced Commutation . Gate Trigger Circuit: Resistance Firing Circuit, Resistance capacitance firing circuit. (Text 2)  |         | <b>08 Hours</b>       | <b>L1,L2, L3</b>                            |
| <b>Module -3 : Controlled Rectifiers &amp; AC Voltage Controllers</b>  |         |                       |   |
| Controlled Rectifiers - Introduction, principle of phase controlled converter operation, Single phase full converters, Single phase dual converters.<br>AC Voltage Controllers - Introduction, Principles of ON-OFF Control, Principle of Phase Control, Single phase control with resistive and inductive loads. (Text 1)   |         | <b>08 Hours</b>       | <b>L1,L2,L3</b>                             |
| <b>Module -4 : DC-DC Converters</b>  |         |                       |   |
| DC-DC Converters - Introduction, principle of step-down operation and it's analysis with RL load, principle of step-up operation, Step-up converter with a resistive load, Performance parameters, Converter classifications. (Text 1)   |         | <b>08 Hours</b>       | <b>L1, L2</b>                               |
| <b>Module-5 : Pulse Width Modulated Inverters</b>  |         |                       |   |
| Pulse Width Modulated Inverters- Introduction, principle of operation, performance parameters, Single phase bridge inverters, voltage control of single phase inverters, current source inverters, Variable DC-link inverter. (Text 1)   |         | <b>08 Hours</b>       | <b>L1,L2</b>                                |

**Course Outcomes:**

- After studying this course, students will be able to:
- Describe the characteristics of different power devices and identify the applications.
- Illustrate the working of DC-DC converter and inverter circuit.
- Determine the output response of a thyristor circuit with various triggering options.
- Determine the response of controlled rectifier with resistive and inductive loads.

**CREDITS-03****Course Objectives:** This course will enable students to:

- Learn the basic principle of optical fiber communication with different modes of light propagation.
- Understand the transmission characteristics and losses in optical fiber.
- Study of optical components and its applications in optical communication networks.
- Learn the network standards in optical fiber and understand the network architectures along with its functionalities.

**Cryptography And Network security**  
 [As per Choice Based Credit System (CBCS) Scheme]  
 SEMESTER-VII

|                               |         |            |    |
|-------------------------------|---------|------------|----|
| Subject Code                  | 18EC734 | IA Marks   | 50 |
| Number of Lecture Hours/Week  | 03      | Exam Marks | 50 |
| Total Number of Lecture Hours | 40      | Exam Hours | 03 |

CREDITS – 03

**Course objectives:** Course Objectives: This course will enable students to:

- Know about security concerns in Email and Internet Protocol.
- Understand cyber security concepts.
- List the problems that can arise in cyber security.
- Discuss the various cyber security frame work.

| Modules   | Teaching Hours  | Revised Bloom's Taxonomy (RBT) Level |
|---|-----------------|--------------------------------------|
| <b>Module -1</b>  |                 |                                      |
| Services, mechanisms and attacks, The OSI security architecture, A model for network security Symmetric Cipher Model.   | <b>08 Hours</b> | <b>L1, L2</b>                        |
| <b>Module -2</b>  |                 |                                      |
| Substitution Techniques, Transposition Techniques, Simplified DES, Data encryption standard (DES), The strength of DES, Differential and Linear Cryptanalysis, Block Cipher Design Principles and Modes of Operation, Evaluation Criteria for Advanced Encryption Standard, The AES Cipher. | <b>08 Hours</b> | <b>L1, L2</b>                        |
| <b>Module -3</b>  |                 |                                      |
| Principles of Public-Key Cryptasystems, The RSA algorithm, Key Management, Diffie - Hellman Key Exchange, Elliptic Curve Arithmetic, Authentication functions, Hash Functions.  | <b>08 Hours</b> | <b>L1, L2, L3</b>                    |
| <b>Module -4</b>  |                 |                                      |
| Web Security Consideration, Security socket layer (SSL) and Transport layer security, Secure Electronic Transaction.  | <b>8 Hours</b>  | <b>L1, L2</b>                        |
| <b>Module -5</b>  |                 |                                      |
| Viruses and Related Threats, Virus Countermeasures. Firewalls Design Principles, Trusted Systems.   | <b>8 Hours</b>  | <b>L1, L2</b>                        |

**Course outcomes:** At the end of the course, the students will be able to

- Explain network security protocols
- Understand the basic concepts of cyber security
- Discuss the cyber security problems
- Explain Enterprise Security Framework
- Apply concept of cyber security framework in computer system administration

### **3D PRINTING TECHNOLOGY**

[As per Choice Based Credit System (CBCS) Scheme]

SEMESTER-VII

|                          |         |            |    |
|--------------------------|---------|------------|----|
| Subject Code             | 18XX742 | CIE Marks  | 50 |
| Number Lecture Hour/Week | 3       | SEE Marks  | 50 |
| Number of Lecture Hours  | 40      | Exam Hours | 03 |

CREDITS-03

**Course Objectives:** This course will enable students :

- Understand the basic concepts and nuances of 3D Printing Technology

| <b>Modules</b> | <b>Teaching Hours</b> | <b>Revised Bloom's Taxonomy (RBT) Level</b> |
|----------------|-----------------------|---|
|----------------|-----------------------|---|

#### **Module -1**

|   |                 |              |
|---|-----------------|--------------|
| Introduction; Design considerations – Material, Size, Resolution, Process; Modelling and viewing - 3D; Scanning; Model preparation – Digital; Slicing; Software; File formats | <b>08 Hours</b> | <b>L1,L2</b> |
|---|-----------------|--------------|

#### **Module -2**

|  |                 |                 |
|--|-----------------|-----------------|
| PRINCIPLE Processes – Extrusion, Wire, Granular, Lamination, Photopolymerisation; Materials – Paper, Plastics, Metals, Ceramics, Glass, Wood, Fibre, Sand, Biological Tissues, Hydrogels, Graphene; Material Selection – Processes, applications, limitations. | <b>08 Hours</b> | <b>L1,L2,L3</b> |
|--|-----------------|-----------------|

#### **Module -3**

|  |                 |                    |
|--|-----------------|--------------------|
| INKJET TECHNOLOGY Printer – Working Principle, Positioning System, Print-head, Print bed, Frames, Motion control; Print-head Considerations -Continuous Inkjet, Thermal Inkjet, Piezoelectric Drop-On-Demand; Material Formulation for jetting; Liquid based fabrication -Continuousjet, Multijet; Powder based fabrication – Color-jet. | <b>08 Hours</b> | <b>L1,L2,L3,L4</b> |
|--|-----------------|--------------------|

#### **Module -4**

|   |                 |                     |
|---|-----------------|---------------------|
| LASER TECHNOLOGY Light Sources – Types, Characteristics; Optics – Deflection, Modulation; Material feeding and flow – Liquid, powder; Printing machines – Types, Working Principle, Build Platform, Print-bed Movement, Support structures. | <b>08 Hours</b> | <b>L1, L2,L3,L4</b> |
|---|-----------------|---------------------|

#### **Module-5**

|   |                 |                 |
|---|-----------------|-----------------|
| INDUSTRIAL APPLICATIONS Product Models, manufacturing – Printed electronics, Biopolymers, Packaging, Healthcare, Food, Medical, Biotechnology, Displays; Opensource; Future trends. | <b>08 Hours</b> | <b>L1,L2,L3</b> |
|---|-----------------|-----------------|

**Course Outcomes:** At the end of the course the student will be able to:

- Learn 3D printing workflow
- Understand the basic types of 3D Printing, materials used and their applications
- Understand how position and orientation affects the build's properties.
- Ability to understand details of product design.
- Select appropriate method for designing and modeling applications

| <b>NEURAL NETWORK AND DEEP LEARNING</b><br>[As per Choice Based Credit System (CBCS) Scheme]<br>SEMESTER-VII  |         |                           |   |

**COMPUTER NETWORKS LAB**

[As per Choice Based Credit System (CBCS) Scheme]

**SEMESTER-VII**

|                                  |         |            |    |
|----------------------------------|---------|------------|----|
| Subject Code                     | 18ECL75 | CIE Marks  | 50 |
| Number Lab practice<br>Hour/Week | 02      | SEE Marks  | 50 |
| Total Number of Hours            | 24      | Exam Hours | 03 |

**CREDITS-01****Course Objectives:** This course will enable students to:

- Choose suitable tools to model a network and understand the protocols at various OSI reference levels.
- Design a suitable network and simulate using a Network simulator tool.
- Simulate the networking concepts and protocols using C/C++ programming.
- Model the networks for different configurations and analyze the results.

**Laboratory Experiments****PART-A:****Implement the following in C/C++**

1. Write a program for a HDLC frame to perform the Bit stuffing.
2. Write a program for a HDLC frame to perform the Character stuffing.
3. Write a program for Distance vector algorithm to find suitable path for transmission.
4. Implement Dijkstra's algorithm to compute the shortest routing path.
5. For the given data, use CRC-CCITT polynomial to obtain CRC code. Verify the program for the cases
  - a. Without error
  - b. With error
6. Implementation of Stop and Wait Protocol.
7. Implementation of Sliding Window Protocol.
8. Write a program for congestion control using leaky bucket algorithm.

**PART-B:****Simulation experiments using NS2/ NS3/ OPNET/ NCTUNS/ NetSim/QualNet or any other equivalent tool**

1. Implement a point to point network with four nodes and duplex links between them. Analyze the network performance by setting the queue size and varying the bandwidth.
2. Implement a four node point to point network with links n0-n2, n1-n2 and n2-n3. Apply TCP agent between n0-n3 and UDP between n1-n3. Apply relevant applications over TCP and UDP agents changing the parameter and determine the number of packets sent by TCP/UDP.
3. Implement Ethernet LAN using n (6-10) nodes. Compare the throughput by changing the error rate and data rate.
4. Implement Ethernet LAN using n nodes and assign multiple traffic to the nodes and obtain congestion window for different sources/ destinations.
5. Implementation of Link state routing algorithm.

**Course outcomes:** On the completion of this laboratory course, the students will be able to:

- Use the network simulator for learning and practice of networking algorithms.
- Illustrate the operations of network protocols and algorithms using C programming.
- Simulate the network with different configurations to measure the performance parameters.
- Implement the data link and routing protocols using C programming.

## LOW POWER VLSI DESIGN LAB

[As per Choice Based Credit System (CBCS) Scheme]

### SEMESTER-VII

|                               |          |            |    |
|-------------------------------|----------|------------|----|
| Subject Code                  | 18ECL763 | CIE Marks  | 50 |
| Number Lab practice Hour/Week | 02       | SEE Marks  | 50 |
| Total Number of Hours         | 24       | Exam Hours | 03 |

#### CREDITS-01

**Course Objectives:** This course will enable students to:

- Understand the different parameters which are going to effect on power.
- Understand the different types of power dissipations.
- Learn different types of low power VLSI designs techniques.
- Learn the use of different EDA tools.
- Understand the design and realization of CMOS Digital circuits.

#### **Laboratory Experiments**

##### **Following Experiments to be done using Mentor Graphics/Cadence Tool/ Spice Tool**

Design, simulate and estimate the power dissipation for following circuits using

a) Conventional CMOS techniques.

1. Inverter
2. NAND and NOR
3. XOR/ XNOR

b) MTCMOS techniques.

4. D-Latch
5. NAND and NOR
6. XOR/ XNOR

c) DTCMOS techniques.

7. Inverter

d) compare static NOR and dynamic NOR

e) Glitch free AND circuit.

f) D-latch using clock gating.

**Course outcomes:** After studying this course, students will be able to:

- Understand the different parameters which are going to effect on power.
- Understand the different types of power dissipations.
- Implementing different types of low power VLSI designs techniques.
- Comparative study on power dissipation of various techniques..
- Design and realization of CMOS Digital circuits.

**PYTHON LAB**

[As per Choice Based Credit System (CBCS) Scheme]

**SEMESTER-VII**

|                               |          |            |    |
|-------------------------------|----------|------------|----|
| Subject Code                  | 18ECL764 | CIE Marks  | 50 |
| Number Lab practice Hour/Week | 02       | SEE Marks  | 50 |
| Total Number of Hours         | 24       | Exam Hours | 03 |

**CREDITS-01**

**Course Objectives:** This course will enable students to:

- Write, test and debug simple python programs.
- Represent compound data using Python lists, tuples, and dictionaries.
- Read and write data from/to files in Python.
- Program using different libraries available.

**Laboratory Experiments**

**Following experiments are to be done using Python**

1. Write a program to demonstrate basic data type in python.
2. Write a program to demonstrate list and tuple in python.
3. Write a program to print date, time for today and now in python.
4. Write a program to display welcome to SHARNBASVA UNIVERSITY by using classes and objects.
5. Write a program to count frequency of characters in a given file.
6. Write a program to compute GCD and LCM of two numbers.
7. Write a program for checking the given number is even or odd.
8. Write a program to print the factorial of number.
9. Write a program to check whether a given number is palindrome or not.
10. Using a numpy module create an array and check the following:
  - a. Type of array
  - b. Axes of array
  - c. Shape of array
  - d. Type of elements in array.

**Course outcomes:** After studying this course, students will be able to:

- Apply the basics of programming in the Python language.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples and dictionaries for representing compound data.
- Handle files using python.

**DSP ALGORITHM AND ARCHITECTURE LAB**  
 [As per Choice Based Credit System (CBCS) Scheme]  
 SEMESTER-VII

|                               |          |            |    |
|-------------------------------|----------|------------|----|
| Subject Code                  | 18ECL771 | CIE Marks  | 50 |
| Number Lab practice Hour/Week | 02       | SEE Marks  | 50 |
| Total Number of Hours         | 24       | Exam Hours | 03 |

**CREDITS-01**

**Course Objectives:** This course will enable students to:

- Use of instruction set of TMS320C54xx DSP processor to develop ALP for DSP algorithms.
- Learn ALP programming for TMS320C54xx
- Learn the use of Code Composer Studio (CCS) IDE software.
- Understand the design and realization of Digital FIR and IIR filter
- Understand the design and realization of Decimation and Interpolation filters

**Laboratory Experiments**

**Following Experiments to be done using Code Composer Studio (CCS) IDE and DSP Processor**

1. Write a TMS320C54XX assembly language program to add set of 5 numbers stored in an array labeled 'num'
2. Write a TMS320C54XX assembly language program to compute the dot product of two vectors x1 and x2 and store the product in the location y.
3. Write a TMS320C54XX assembly language program to compute the output  $y=mx1+C$ . consider that x1 and C are stored in data memory and m in the program memory. The result y should be stored in data memory. Assume suitable values of m, x1 and C.
4. Write a TMS320C54xx assembly language program to read 100 words from input port address INPORT and store them in the data memory at address 'Buffer'.
5. Write a TMS320C54xx assembly language program to implement  $y(n)=h0 X x(n)+h1 X x(n-1)+h2 X x(n-2)$ .
6. Write the assembly language program to multiply two Q15 numbers Num1 and Num2 and obtain the result N3.
7. Write an assembly language program to implement IIR filter
8. Write an assembly language program to implement FIR filter
9. Write an assembly language program to implement Decimation filter
10. Write an assembly language program to implement interpolation filter

**Course outcomes:** After studying this course, students will be able to:

- Use of instruction set of TMS320C54xx DSP processor to develop ALP for DSP algorithms.
- Implementing the DSP algorithms in ALP
- Use of Code Composer Studio (CCS) IDE software.
- Design and realization of Digital FIR and IIR filter
- Design and realization of Decimation and Interpolation filters

## **OPTICAL COMMUNICATION AND NETWORKING LAB**

[As per Choice Based Credit System (CBCS) Scheme]

SEMESTER-VII

|                               |          |            |    |
|-------------------------------|----------|------------|----|
| Subject Code                  | 18ECL772 | CIE Marks  | 50 |
| Number of Lecture Hour/Week   | 02 Hrs   | SEE Marks  | 50 |
| Total Number of Lecture Hours | 24       | Exam Hours | 03 |

CREDITS-01

**Course Objectives:** This course will enable students to:

- Performance comparison of optical link using LED and LASER for specific distance.
- Performance Evaluation of Point to point optical link at different distances and for different transmitter powers.
- Performance comparison of optical link receivers and for different fibers.
- Impact of optical amplifiers on link performance.

### **Experiments**

1. To study the VI & PI characteristics of the FO-LED.
2. To study the VI &PI characteristics of the Laser Diode.
3. Real time Temperature sensor data transfer using fiber optic
4. To study the transfer Characteristics between the DETECTOR and SOURCE with simplex cable.
5. To study the VOICE communication over the fiber optic cable.
6. To study Voice communication using CODEC.
7. To study PWM signal communication using fiber optic.
8. To study digital data transmission with LED and switch.
9. To study the RS232 interface for PC communication.
10. Measurement of Bit Error Rate
11. Study of free space communication system
12. Pulse Broadening in Fibre Optic Communication

**Course outcomes:** After studying this course, students will be able to:

- Recognize and classify structures of Optical fibers.
- Understand channel impairments like losses and dispersion.
- Classify optical sources and detectors with their principles.
- Get a basic understanding of optical components.
- Analyze and design long distance optical communication link for high speed optical network.

## **SMART AGRICULTURE LAB**

[As per Choice Based Credit System (CBCS) Scheme]

### **SEMESTER-VII**

|                               |          |            |    |
|-------------------------------|----------|------------|----|
| Subject Code                  | 18ECL773 | CIE Marks  | 50 |
| Number Lab practice Hour/Week | 02       | SEE Marks  | 50 |
| Total Number of Hours         | 24       | Exam Hours | 03 |

#### **CREDITS-01**

**Course Objectives:** This course will enable students to:

- Know the applications of various sensors used in agriculture
- Learn the various crops cultivated in the local area and crop diseases
- Implement the prototype for soil nutrients detection system
- Implement the prototype for measurement of soil PH value.
- Implement a prototype for IoT based weather reporting system

#### **Laboratory Experiments**

1. Study of various sensors used in the modern agriculture: Temperature and humidity sensor, Soil moisture sensor, NPK sensor, RFID, PIR sensor, LDR etc.
2. Study of major field crops cultivated in the Kalaburagi district and crop diseases.
3. Measure Soil Nutrient using Arduino & Soil NPK Sensor.
4. Monitoring the soil moisture using the adrino microcontroller
5. Determination of PH value of a soil using adrino microcontroller
6. IoT based Temperature and humidity measurement system for green houses
7. Monitoring of light intensity in green house using adrino microcontroller
8. REID sensing technology based smart agriculture system

**Course outcomes:** After studying this course, students will be able to:

- Use the various sensors for smart agriculture
- Know the various crops cultivated locally and crops affected by various diseases
- Build the prototype for soil nutrients detection system
- Build the prototype for measurement of soil PH value.
- Build the prototype for IoT based weather reporting system

**CRYPTOGRAPHY & NETWORK SECURITY LAB**  
 [As per Choice Based Credit System (CBCS) Scheme]  
 SEMESTER-VII

|                                  |          |            |    |
|----------------------------------|----------|------------|----|
| Subject Code                     | 18ECL774 | CIE Marks  | 50 |
| Number of Lab practice Hour/Week | 02       | SEE Marks  | 50 |
| Total Number of Hours            | 24       | Exam Hours | 03 |

**CREDITS-01**

**Course Objectives:** This course will enable students to:

- Learn to implement Substitution & Transposition Techniques.
- Learn to implement the algorithms DES, RSA,MD5,SHA-1
- Learn to use network security tools like GnuPG, KF sensor, Net Strumbler.

**Laboratory Experiments**

1. Implement the following substitution & transposition techniquesconcepts:
  - a) Caesar cipher
  - b) Playfair cipher
  - c) Hill cipher
  - d) Vigenere cipher
  - e) Rail fence – row & column transformation.
2. Implement the following algorithms
  - a) DES
  - b) RSA Algorithm
  - c) Diffiee-Hellman
  - d) MD5
  - e) SHA-1
3. Implement the Signature Scheme - Digital Signature Standard
4. Demonstrate how to provide secure data storage, secure data transmission and forcreating digital signatures (GnuPG).
5. Setup a honey pot and monitor the honeypot on network (KF Sensor)
6. Installation of rootkits and study about the variety of options.
7. Perform wireless audit on an access point or a router and decrypt WEP and WPA.( Net Stumbler).
8. Demonstrate intrusion detection system (ids) using any tool (snort or any other s/w)

**Course outcomes:** After studying this course, students will be able to:

- Learn to implement Substitution & Transposition Techniques.
- Learn to implement the algorithms DES, RSA,MD5,SHA-1
- Learn to use network security tools like GnuPG, KF sensor, Net Strumbler.

| <b>INDUSTRIAL PSYCHOLOGY AND ORGANISATIONAL BEHAVIOUR</b><br><b>B.Tech, VII Semester, Electronics &amp; Communication Engineering</b><br>[As per Choice Based Credit System (CBCS) scheme]   |         |                       |   |
|--|---------|-----------------------|---|
| Subject Code   | 18HSM79 | CIE Marks             | 50  |
| Number of Lecture Hour/Week  | 01      | SEE Marks             | 50  |
| Total Number of Lecture Hours  | 20      | Exam Hours            | 03  |
| <b>CREDITS-01</b>  |         |                       |   |
| <b>Course Objectives:</b> This course will enable students to: <ol style="list-style-type: none"> <li>1. Relating human psychology to science</li> <li>2. Understand the human psychology</li> <li>3. Understand the nature of organization and organization models</li> <li>4. Understand the human social communication</li> <li>5. Understand the leadership qualities</li> </ol> |         |                       |   |
| <b>Modules</b>   |         | <b>Teaching Hours</b> | <b>Revised Bloom's Taxonomy (RBT) Level</b> |
| <b>Module -1</b>   |         |                       |   |
| Introduction to I/O psychology:<br>Major fields of I/O psychology, brief history of I/O psychology, employment of I/O psychology, ethics in I/O psychology. (Chapter-1)  |         | <b>3 Hours</b>        | <b>L1,L2</b>                                |
| <b>Module -2</b>   |         |                       |   |
| Organisational communication:<br>Types of organizational communication, interpersonal communication, improving employee communication skills. (Chapter-11)   |         | <b>3 Hours</b>        | <b>L1,L2</b>                                |
| <b>Module -3</b>   |         |                       |   |
| Leadership :<br>Introduction, personal characteristics associated with leadership, interaction between the leadership and the situation specific leader skills, leadership where we are today. (Chapter-12)  |         | <b>5 Hours</b>        | <b>L1,L2</b>                                |
| <b>Module -4</b>   |         |                       |   |
| Group behaviour- teams and conflicts<br>Group dynamics, factors affecting group performance, individual versus group performance, group conflicts. (Chapter-13)  |         | <b>5 Hours</b>        | <b>L1, L2</b>                               |
| <b>Module-5</b>  |         |                       |   |
| Stress management:<br>Dealing with the demands of life and work, stress defined, predisposition to stress, sources of stress, consequences of stress, stress reduction intervention related to life /work issues. (Chapter-15)   |         | <b>4 Hours</b>        | <b>L1,L2</b>                                |

**Course Outcomes:** At the end of this course, students would be able to

1. Comprehend the knowledge and concepts of human psychology
2. know the importance of psychology
3. have insight into individual and group behavior
4. deal with people in better way
5. motivate groups and build groups
